

I claim:

- 5 1. A device for raising and supporting human testes when upper legs of a patient are substantially horizontal, comprising:

 a pair of spaced-apart, downwardly curved members, each adapted to be positioned over a respective upper leg of a patient and proximate a groin area of said patient; and

10 a support member situate intermediate said pair of curved members, adapted to raise and support one or more male testes when said device is positioned proximate said groin area.

- 15 2. A device for raising and supporting one or more male testes of a patient during ultrasound examination when said patient is lying in a substantially supine position, comprising:

20 a pair of spaced-apart, downwardly curved members, each adapted to be positioned on a respective upper leg of said patient; and

 a support member, positioned intermediate said pair of curved members and coupled thereto, adapted to support one or more male testes thereon when
25 positioned in a groin area of said patient.

3. A device for supporting human testes when upper legs of a patient are substantially horizontal, comprising:

a support member, having mutually opposite side edges, adapted for positioning intermediate legs of said patient proximate a groin area of said patient to support one or more male testes of said patient; and

5

a downwardly curved member extending from each of said mutually opposite side edges of said support member, each adapted to rest upon a respective leg of said patient when said support member is positioned to support said testes.
